SUMMARY

Software engineer who owned a deployed production system across the full software life cycle: specification, design, implementation, validation and support. Sole engineer on closly.io, a marketplace that takes payments and routes signed contracts, with 1,346 commits and a ~27,000-line backend test harness. Computer Science honours degree (Software Engineering), Trent University, April 2025. Canadian citizen.

WORK EXPERIENCE

Lead Developer & Co-Founder | Closly

October 2025 to August 2026

- Shipped closly.io to production as sole engineer, owning requirements, design, implementation, testing, deployment and support. 1,346 commits.
- Built a ~27,000-line backend test harness running security simulations, deal-flow scenarios and document-extraction cases.
- Designed the Mongoose data model and REST API behind a 6-stage deal-tracking pipeline, validating requests at the boundary with Zod.
- Integrated an ONNX/MobileBERT intent model into a 4-layer message-security firewall that screens every message sent on the platform for off-platform contact attempts.
- Integrated Stripe checkout, Google OAuth and DocuSeal e-signature, with idempotent webhook handling so a repeated delivery is processed once.
- Ran a multi-wave refactor (39 of the last 50 commits) splitting oversized components into focused hooks and hardening the auth lifecycle.
- Containerized both apps with Docker and operated production solo: Coolify on a Hetzner VPS, nginx behind Cloudflare, Gitleaks in CI.

PROJECTS

Summit Land Partners Website | React 19, Vite

July 2026 to August 2026

- Redesigned and updated Summit Land Partners' live marketing site, adding SMS consent opt-in and Terms and Privacy pages for carrier A2P 10DLC compliance, and aligned opt-out language with the FCC rule.
- Fixed the contact form and migrated its email delivery to a company-controlled account (22 commits).

EDUCATION

Bachelor of Science, Computer Science (Four-Year, Honours) | Trent University, Peterborough ON

2021 to 2025

Specialization: Software Engineering. Relevant coursework: High-Performance Computing.

Game Development Program (3-year) | Algonquin College, Ottawa ON

2018 to 2021

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python 3.12, SQL; C and C++ (coursework)
- **Software life cycle:** requirements and design documents, automated testing, refactoring, CI, Git, production support
- **Systems:** object-oriented programming, Socket.io real-time messaging, REST APIs
- **Frameworks:** Node.js, Express, React 19, Vite, TanStack Query v5, Zustand
- **Data:** MongoDB (Mongoose), MySQL
- **Infra:** Docker, Coolify, Hetzner VPS, nginx, Cloudflare, Gitleaks
